NOTICE TO THE CONTRACTOR

THE EARTHWORK SUMMARY IS PROVIDED AS A COURTESY AND CONVENIENCE TO THE CONTRACTOR. QUANTITIES SHOWN ARE APPROXIMATE, BASED ON THE DIFFERENCES BETWEEN EXISTING GROUND ELEVATIONS AND ROUGH GRADE ELEVATIONS. QUANTITIES PROVIDED MAKE NO PROVISIONS FOR STRIPPING, OR OVEREXCAVATION. VARIABLES SUCH AS COMPACTION, SHRINKAGE AND THE CONTRACTORS METHOD OF OPERATION, WILL CAUSE THE VOLUME OF DIRT MOVED IN THE FIELD TO DEVIATE FROM THE CALCULATED QUANTITIES. IT IS THE CONTRACTOR'S RESPONSIBILITY TO DETERMINE THE EARTHWORK REQUIREMENTS TO ROUGH GRADE THIS JOB.

HORIZONTAL CONTROL PLAN
OJAI DIGNITY MOVES
611 SOUTH MONTGOMERY STREET
OJAI, CA

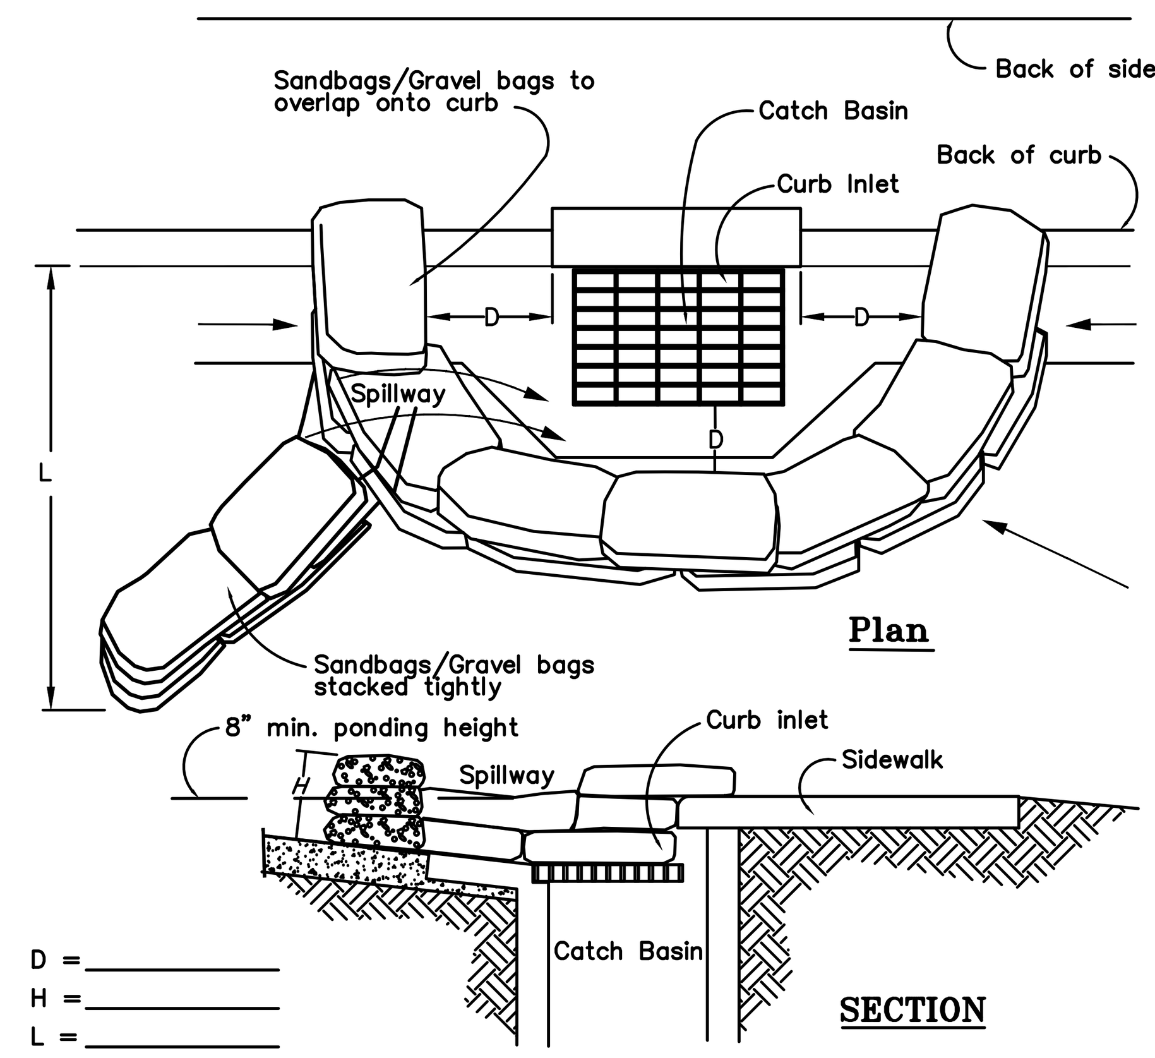
SHEET 7 OF 8
DRAWING NO. DWG NO

Jul 23, 2025 HORIZONTAL CONTROL

General Notes

1. Best Management Practices (BMP's) contained herein reflect minimum requirements. For additional BMP's refer to California Stormwater BMP Handbooks.
2. All construction activity shall be performed in accordance with a Storm Water Pollution Prevention Plan (SWPPP, 1 acre and larger) and/or a Storm Water Pollution Control Plan (SWPCP, less than 1 acre) developed and implemented in compliance with requirements of the Ventura Countywide Stormwater Quality Management Program, National Pollution Discharge Elimination System (NPDES) Permit No. CAS063339.
3. The SWPPP / SWPCP shall:
   a. Identify potential pollutant sources and include the design and placement of BMP's to effectively prohibit the entry of pollutants from the construction site into and onto the street and storm drain system during construction.
   b. Be kept on site and amended to reflect changing conditions throughout the course of construction.
   c. Be kept up to date. Any additional updates requested by agency representatives are to be made immediately.
4. Non-Stormwater discharges are prohibited from entering any storm drain system and/or street.
5. Discharges of pumped ground water require a discharge permit from the State of California Regional Water Quality Control Board (RWQCB).
6. Pollutants shall be removed from stormwater discharges to the Maximum Extent Practicable (MEP) through design & implementation of the SWPPP / SWPCP.
7. A standby crew for emergency work shall be available at all times during the rainy season (Oct. 1 to Apr. 15). Necessary materials shall be available on site and stockpiled at convenient locations to facilitate rapid construction of emergency devices when rain is imminent.
8. Portable sanitary facilities shall be located on relatively level ground away from traffic areas, drainage courses, and storm drain inlets.
9. Employees, subcontractors and suppliers shall be educated on all BMP's including concrete waste storage and disposal procedures.
10. Sediment control practices shall effectively prevent a net increase of sediment load in stormwater discharge.

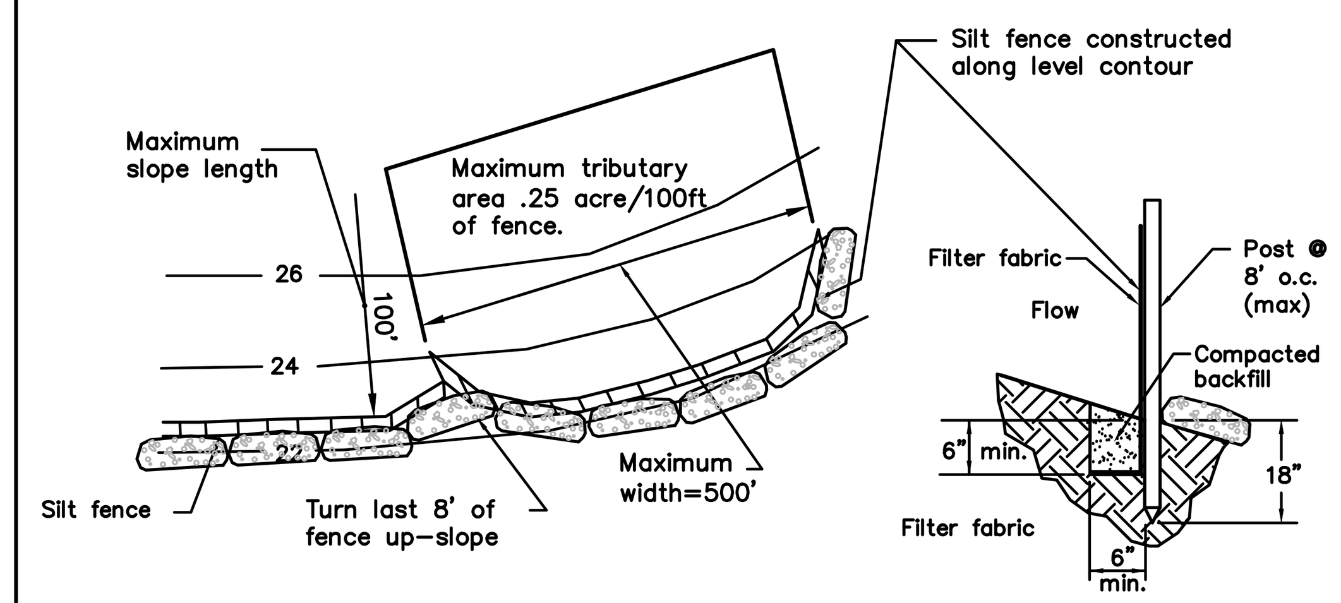
A Catch Basin/Inlet Protection



Notes:

1. Catch Basin/Inlet protection shall be installed wherever there is a potential of stormwater or non-stormwater being discharged into it.
2. Inlet protection is required along with other pollution prevention measures such as; erosion control, soil stabilization, and measures to prevent tracking onto paved surfaces.
3. Modify inlet protection as needed to avoid creating traffic hazards.
4. Include inlet protection measures at hillside v-ditches and misc. drainage swales.
5. Inlet protection shall be inspected and accumulated sediments removed. Sediment shall be disposed of properly and in a manner that assures that the sediment does not enter the storm drain system
6. Damaged bags shall be replaced immediately.
7. Additional sandbag sediment traps shall be placed at intervals as indicated on site plan.

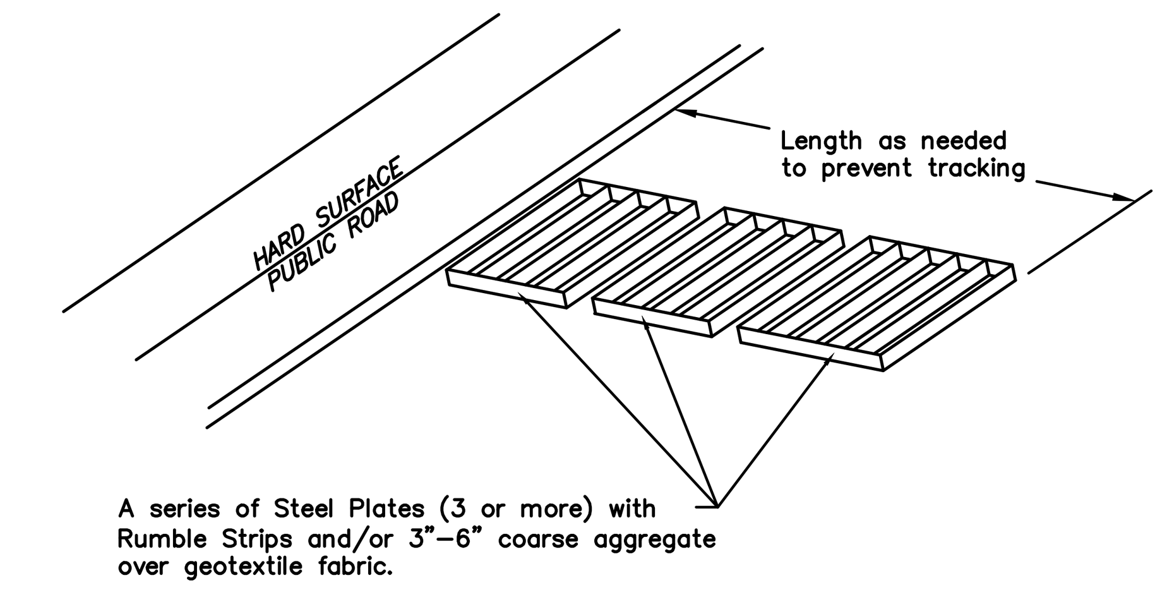
B Silt Fence



Notes:

1. Maintain silt fence for duration of construction period. Construct the silt fence along a level contour.
2. Silt fences shall remain in place until the disturbed area is permanently stabilized.
3. Provide sufficient room for runoff to pond behind the fence and allow sediment removal equipment to pass between the silt fence and toe of slope or other obstructions. About 1200 sq. ft. of ponding area shall be provided for every acre draining to the fence.
4. Turn the ends of the filter fence uphill to prevent stormwater from flowing around the fence.
5. Leave an undisturbed or stabilized area immediately downslope from the fence.
6. Do not place in live stream or intermittently flowing channels.
7. When standard filter fabric is used, a wire mesh support fence shall be fastened securely to the upslope side of the posts using heavy-duty wire staples at least 1 inch long, tie wires or hog rings.

C Stabilized Construction Entrance



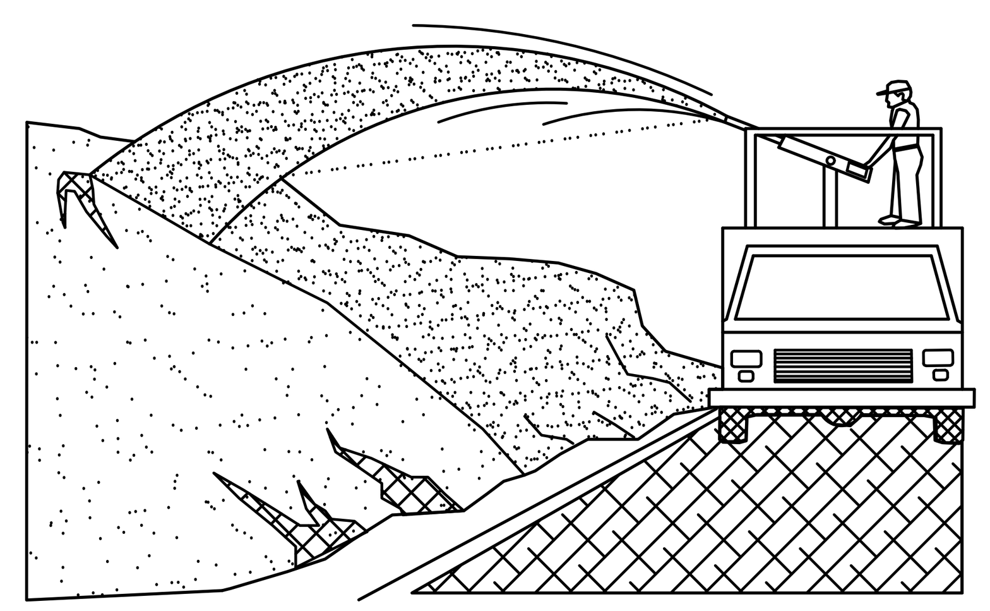
Notes:

1. Sediments and other materials shall not be tracked from the site by vehicle traffic. The construction entrance roadways shall be stabilized so as to prevent sediments from being deposited into the public roads. Depositions must be swept up immediately and may not be washed down by rain or other means into the storm drain system.
2. Stabilized construction entrance shall be:
   a. Located at any point where traffic will be entering or leaving a construction site to or from a public right of way, street, alley, and sidewalk or parking area.
   b. A series of steel plates with "rumble strips", and/or 3"-6" coarse aggregate, min. 12" thickness, with length & width as needed to adequately prevent any tracking onto paved surfaces.
3. Adding a wash rack with a sediment trap large enough to collect all wash water can greatly improve efficiency.
4. All vehicles accessing the construction site shall utilize the stabilized construction entrance sites.

Street Maintenance

1. Remove all sediment deposited on paved roadways immediately.
2. Sweep paved areas that receive construction traffic whenever sediment becomes visible.
3. Pavement washing with water is prohibited if it results in a discharge to the storm drain system.

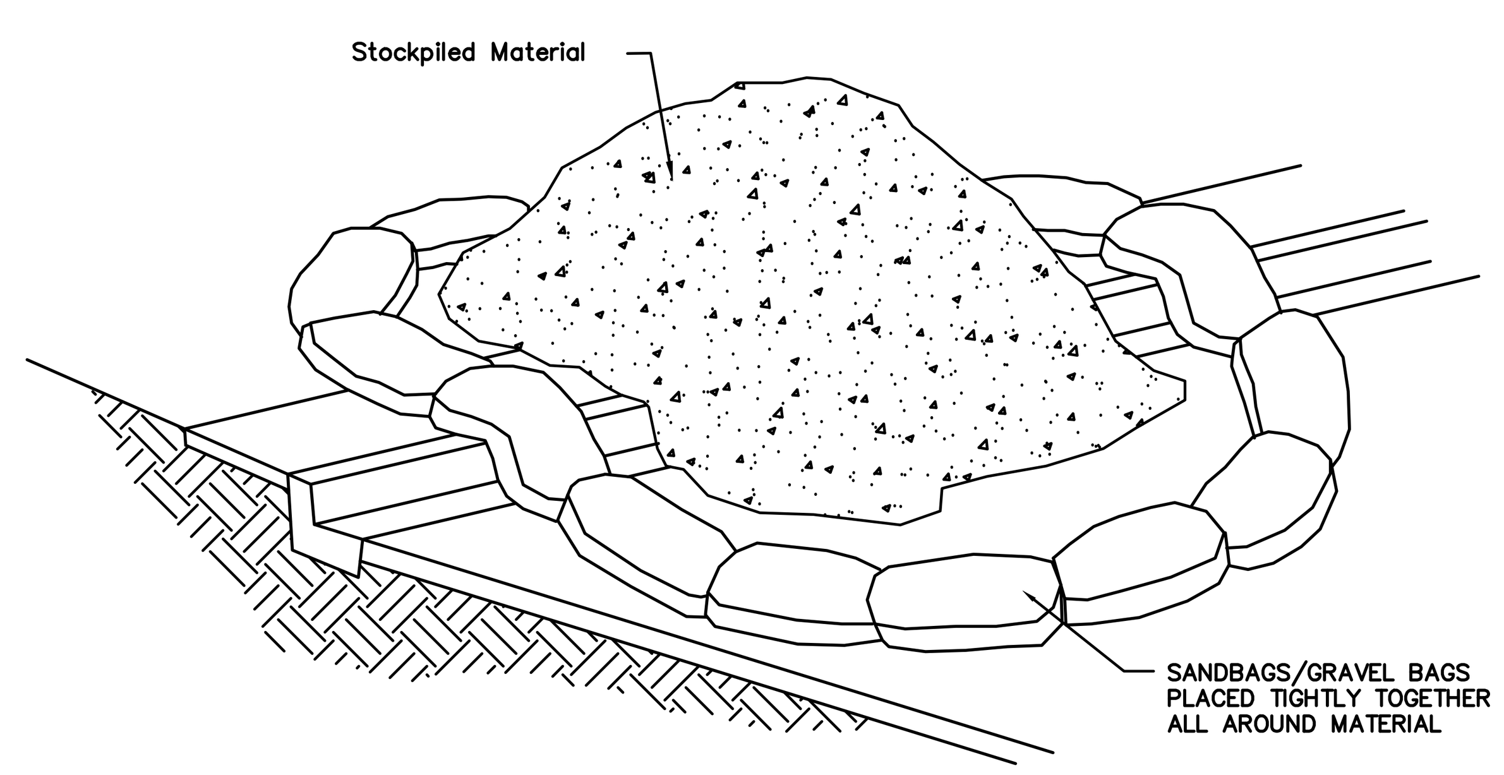
D Erosion Control



Notes:

1. Soil/Slope stabilization practices shall be designed to preserve existing vegetation where feasible and to revegetate open areas as soon as feasible after grading. These control practices shall include temporary seeding, permanent seeding, mulching, sod stabilization, vegetative buffer strips, protection of trees, or other soil stabilization practices.
2. Soil stabilization shall be implemented year-round. Exposed soil and stockpiles shall be covered after 14 days of inactivity.
3. Stabilization practices shall control/prevent erosion from the forces of wind and water.
4. Stabilization practices shall be implemented in conjunction with sediment trapping/filtering practices and practices to reduce the tracking of sediment onto paved roads.
5. When using straw mulching, the minimum application shall be 1.5 tons/acre. Mulch must be anchored immediately to minimize loss by wind or water.
6. When using hydroseeding/mulching, the minimum application of wood fiber shall be 2,000 lbs/acre, that does not contain more than 50 percent newsprint.
7. For seeding recommendations, contact: USDA, Natural Resources Conservation Service or Ventura County RCD.

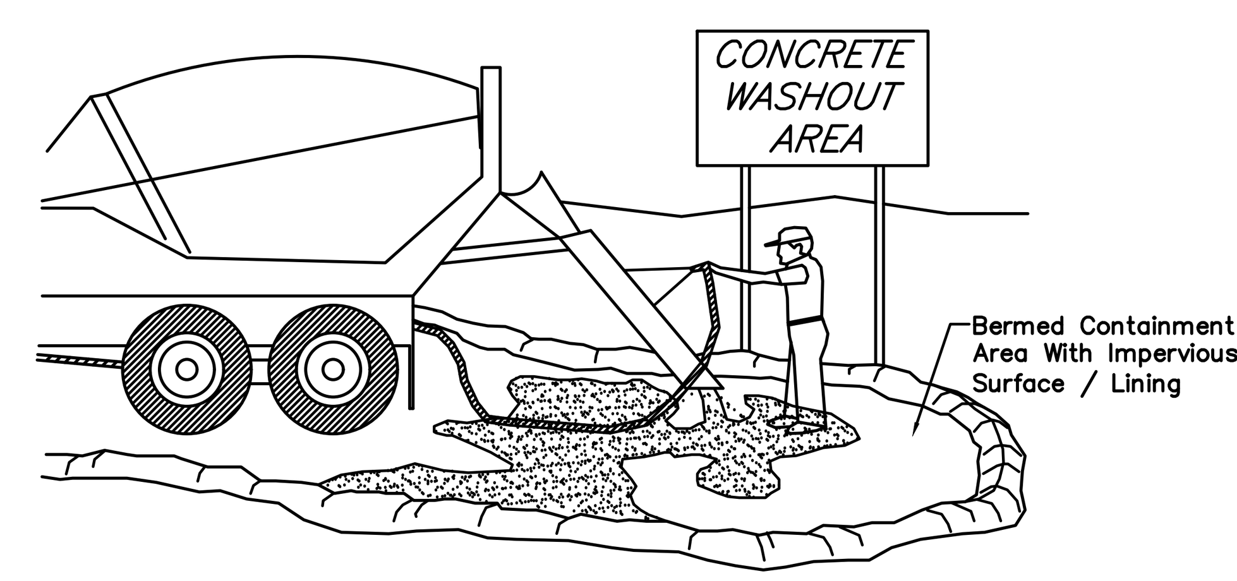
E Material Storage



Notes:

1. Dirt and other construction related materials placed in the street or on other impervious surfaces must be contained with sandbags or other measures to prevent transport to the stormdrain system.
2. Any construction material stored or stockpiled on-site shall be protected from being transported by the force of wind or water.

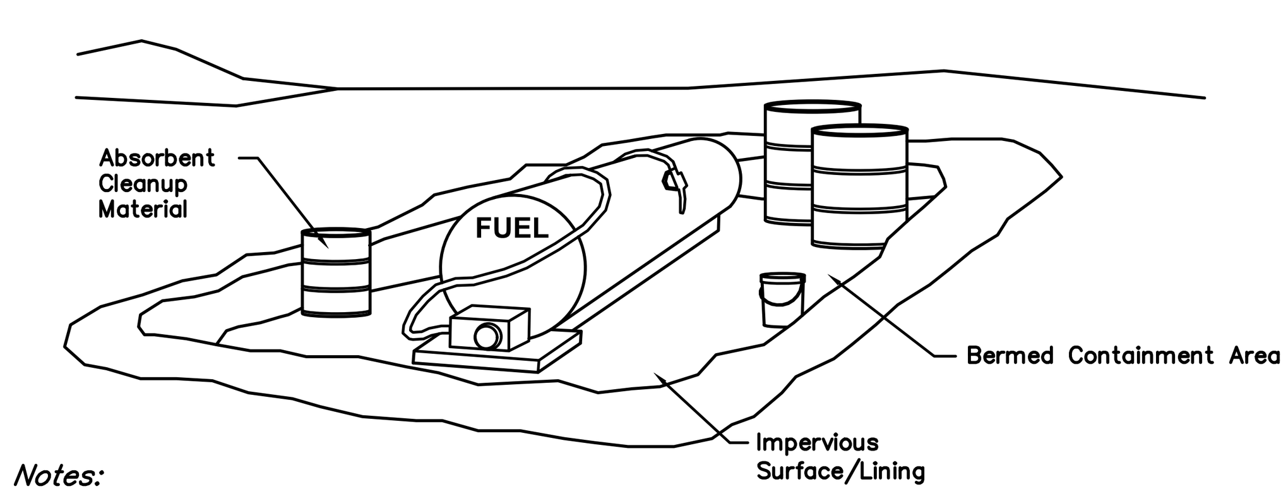
F Concrete Waste Management



Notes:

1. Excess and waste concrete shall not be washed into the street or into a drainage system.
2. For washout of concrete and mortar products, a designated containment facility of sufficient capacity to retain liquid and solid waste shall be provided on site.
3. Slurry from concrete and asphalt saw cutting shall be vacuumed or contained, dried, picked up and disposed of properly.

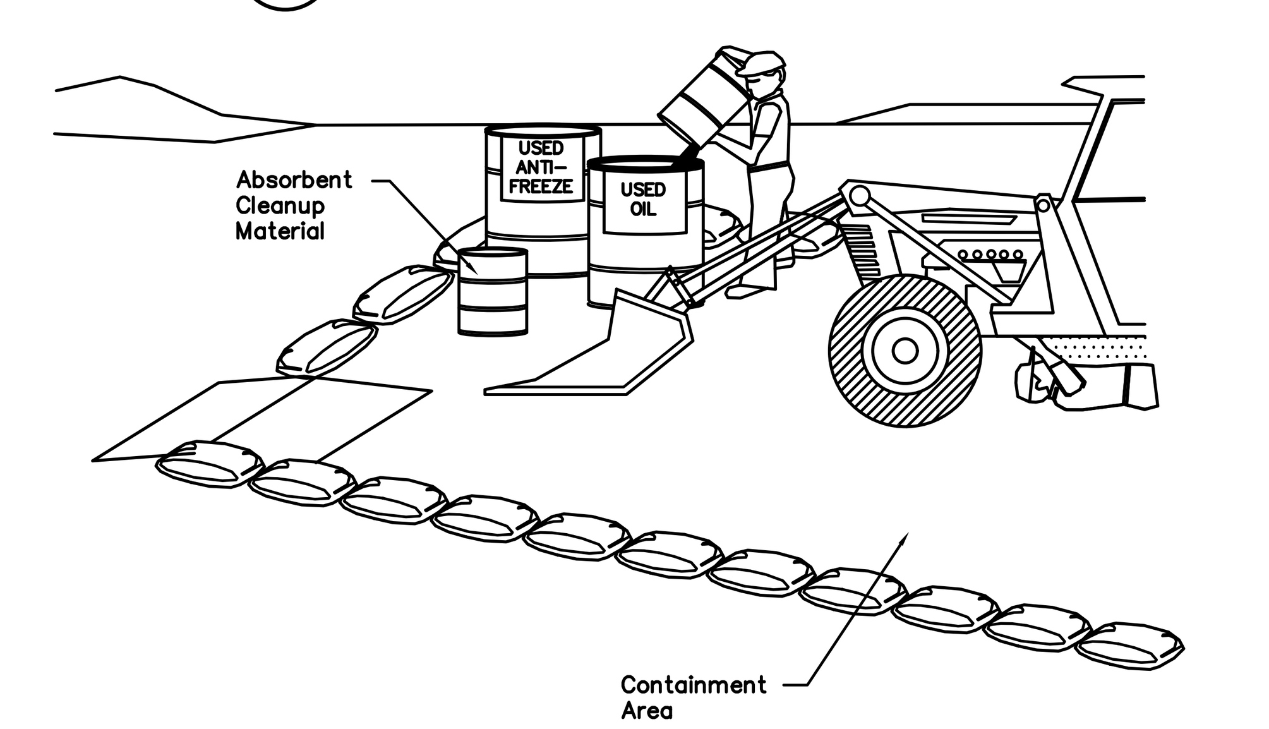
G Vehicle/Equipment Fueling



Notes:

1. Fueling shall be performed in a designated area, min. 50' away from drainage courses.
2. Absorbent cleanup material shall be on site and used immediately in the event of a spill.

H Equipment Repair/Maintenance



Notes:

1. Leaking vehicles and equipment shall not be allowed on-site. Equipment and vehicles shall be inspected frequently for leaks and shall be repaired immediately. Clean up spills and leaks promptly with absorbent materials; do not flush with water.
2. Vehicles and equipment shall be maintained, and repaired on-site only in designated areas. Prevent run-on and run-off from designated areas. Containment devices shall be provided and areas shall be covered if necessary.
3. Designate on-site vehicle and equipment maintenance areas, min. 50' away from storm drain inlets and watercourses.
4. Always use secondary containment, such as a drain pan or drop cloth, to catch spills and leaks when removing or changing fluids.
5. Legally dispose of used oils, fluids, and lubricants.
6. Provide spill containment dikes or secondary containment around stored oil, fuel, and chemical drums.
7. Maintain an adequate supply of absorbent spill cleanup materials in designated area.

TREE PROTECTION NOTES:

1. "TREE PROTECTION ZONE" (TPZ) FOR EXISTING TREES: BEFORE BEGINNING ANY DEMOLITION OR CONSTRUCTION OPERATIONS, THE CONTRACTOR SHALL INSTALL A TEMPORARY FENCE AROUND ALL EXISTING TREES TO BE SAVED.
2. TPZ FOR ALL TREE SPECIES (EXCEPT PROTECTED TREES) THE FENCE SHALL BE INSTALLED NO CLOSER THAN THE DRIP-LINE (OR AS FAR AWAY FROM THE TRUNK AS PRACTICABLE).
3. TPZ FOR ALL PROTECTED TREES (AS DEFINED IN SECTION B) THE FENCE SHALL BE INSTALLED NO CLOSER TO THE TREE THAN 6' FROM THE EDGE OF THE TREE'S DRIPLINE OR 15' FEET FROM THE TRUNK, WHICHEVER IS GREATER.(EXCEPT AS NOTED IN ARBORIST DRAWINGS ABOVE)
4. THE TPZ SHOULD NOT BE REDUCED TO ANY AREA SMALLER THAN THE CRITICAL ROOT ZONE (CRZ). COMPROMISING THE CRZ WILL REDUCE THE CHANCE OF LONG TERM TREE SURVIVAL AND INCREASE RISK OF TREE FAILURE.
5. FENCING SHALL CONSIST OF CHAINLINK. ALL CONTRACTORS AND THEIR CREWS SHALL NOT BE ALLOWED INSIDE THIS "SAFE ZONE", NOR SHALL THEY BE ALLOWED TO STORE OR DUMP FOREIGN MATERIALS WITHIN THIS AREA. THE FENCING SHALL REMAIN AROUND EACH TREE TO BE SAVED UNTIL THE COMPLETION OF CONSTRUCTION OPERATIONS.
6. ANY WORK DONE WITHIN THE TPZ TO BE PERFORMED BY HAND DIGGING ONLY. NO GRADING, TRENCHING OR EQUIPMENT IN THIS AREA.
7. SEE ARBORIST'S REPORT.
8. PROTECTED TREES: ALL QUERCUS SP. & PLATANUS SP.
9. AREAS WITHIN THE TPZ TO BE MULCHED 6-12" DEPTH AND KEPT 6-12" AWAY FROM BASE OF TRUNK (SEE DETAIL ABOVE).
10. SUPERVISION BY ARBORIST REQUIRED FOR ACTIVITIES SUCH AS TREE REMOVALS, TRANSPLANTING, DEMOLITION, PLANTING, CANOPY, PRUNING, ROOT PRUNING, GRADING, INSTALLATION OF PROTECTIVE FENCING, TRENCHING, ROOT CARE, PEST CONTROL, MULCHING, SOIL MODIFICATION AND VENTING AND IRRIGATION.
11. ANY TREE DAMAGE SHOULD BE REPORTED TO THE PROJECT ARBORIST AS SOON AS POSSIBLE. SEVERED ROOTS SHOULD BE PRUNED CLEANED TO HEALTHY TISSUE, USING PROPER PRUNING TOOLS. BROKEN BRANCHES SHOULD BE PRUNED TO ISA STANDARDS.
12. PREVENTIVE MEASURE: PRUNING OF THE TREE CANOPIES AND BRANCHES SHOULD BE DONE AT THE DIRECTION OF PROJECT ARBORIST.
13. ACCURATE TREE CANOPIES NOT PROVIDED PER SURVEY. CROWN SPREAD DIAMETER SHOWN ON PLAN PER ARBORIST'S FIELD MEASUREMENTS WITH NOTATION.
14. FURTHER GRADING OR TRENCHING NEAR ANY OF THE PROTECTED TREES NOT TO BE REMOVED IS DISCOURAGED AND SHOULD BE KEPT TO A MINIMUM. WHERE TREE ROOTS MUST BE CUT MAKE ONLY SHARP, CLEAN CUTS TO PROMOTE ROOT CALLUSING AND REGENERATION. AVOID CUTS ON ROOTS GREATER THAN 2".

MAINTENANCE RECOMMENDATION:

1. TREES WITH REDUCED ROOT SYSTEMS WILL NEED SUPPLEMENTAL IRRIGATION DURING CONSTRUCTION AND AFTER IF WINTER RAINS ARE NOT ADEQUATE.

NOTE:
MODIFICATIONS MAY BE MADE TO TREE PROTECTION PLAN PRE-CONSTRUCTION DOCUMENTS.

Preservation and use of available natural resources shall be accomplished through evaluation and careful planning to minimize negative effects on the site and adjacent areas, Preservation of slopes, management of storm water drainage and erosion controls shall comply with this section.

4.106.2 STORM WATER DRAINAGE AND RETENTION DURING CONSTRUCTION. Projects which disturb less than one acre of soil and are not part of a larger common plan of development which in total disturbs one acre or more, shall manage storm water drainage during construction. In order to manage storm water drainage during construction, one or more of the following measures shall be implemented to prevent flooding of adjacent property, prevent erosion and retain soil runoff on the site.

1. Retention basins of sufficient size shall be utilized to retain storm water on the site.
2. Where storm water is conveyed to a public drainage system, collection point, gutter or similar disposal method, water shall be filtered by use of a barrier system, wattle or other method approved by the enforcing agency.
3. Compliance with a lawfully enacted storm water management ordinance.

Note: Refer to the State Water Resources Control Board for projects which disturb one acre or more of soil, or are part of a larger common plan of development which in total disturbs one acre or more of soil.

C. Protect any pipes crossing zones of influence with Schedule 40 black steel sleeves. Zone of influence is defined as the area that projects out at 45 degrees from the outer lower perimeter of footings and grade beams. Do not run piping parallel to footings or grade beams in zones of influence.
D. Provide non-conducting dielectric connections whenever jointing dissimilar metals.
E. Install piping to allow for expansion and contraction without stressing pipe, joints, or connections to fixtures or equipment.
F. Every every precaution shall be taken to install plumbing systems in such a manner as to prevent sound transmission. appropriate isolation, insulation, lintels, frames, blocking, escutcheons, grouting, gaskets, packing, caulking, tapping, filling, etc., all shall be employed to prevent sound transmission. Contractor shall install "Acousto-plumb" at all pipe penetrations to ensure no piping or valves come in direct contact with the structure.
G. Provide striker plates to protect plumbing piping in vulnerable locations.
H. Each vent shall rise vertically to a point not less than 6 inches above the flood-level rim of the fixture served before offsetting horizontally or before being connected to any other vent. Collect vents to minimize roof penetrations and maintain the integrity of the roof assembly. Vent terminations through roof shall be per 2022 CPC 906.0.
I. All floor sinks shall be at least half exposed or in line with the front face of elevated freestanding equipment, and within 15 feet of the condensate producing equipment. Drain lines shall be at least 6 inches off the floor and 1/2 inch away from walls. Each floor sink shall be installed flush with the finished floor.
J. Provide for maintenance of this work for one year following final approval by governing agencies. Maintenance includes all work required in manufacturer's instructions such as inspection, adjustment, repair and replacement of parts as required.
K. Identify all piping with the words "DOMESTIC WATER", "SEWER", "STORM DRAIN", "NATURAL GAS" etc, every six feet.
L. No plumbing piping shall be directly embedded or come in direct contact with the structure. Provide sleeve over all pipes passing through concrete or masonry walls and concrete floors.
M. Install ball valves to shut off and isolate equipment.
N. Provide flexible pipe connectors and plug valves at all natural gas appliances and equipment.
O. Maintain minimum one quarter of an inch per foot slope on all drainage piping.
P. Install cleanouts, vacuum breakers, and backflow preventors in accordance to local and State codes.
Q. Provide hangers and supports per CPC Table 313.3, capable of supporting the tributary weight of pipe and contents, maintain its alignment, and prevent sagging. Provide saddles for insulated pipes. Gas piping shall be supported by metal straps at intervals not to exceed those shown in Table 1210.3.5.1 of CPC. All piping and equipment shall be suitably restrained and anchored in both horizontal and vertical directions to withstand seismic forces as required by the State of California and in compliance with SMACNA standards (Sheet Metal and Air Conditioning Contractors' National Association, Inc.)
R. Avoid running plumbing piping above electrical equipment.
S. Use fire stop by Hilti or 3M at pipe penetrations of fire rated assemblies. Fire stop materials shall be listed and compatible with the piping materials. See architect for the location and rating of fire assemblies.
T. Provide the next available pipe size up, if the size indicated on the Drawings is not available.
U. Test all new piping systems as specified. Install shut-off valves to isolate existing systems that do not require testing. Existing systems that have been connected to by new systems shall be tested to the extent of the closest new connection. Tests must be performed and systems approved prior to painting, covering, or concealing piping. Provide all test equipment, instrumentation and labor in conjunction with tests. Prior to test, protect or remove all devices, and other items which are not designed to stand pressures used in test. Accomplish testing of piping in sections so as not to leave any portion of pipe or joints untested. Obtain prior approval for test procedures. Responsibility for Damages: Bear costs of repair and restoration of Work of other trades damaged by tests or cutting done in connection with tests. Domestic Water systems: Test all portions of new water systems at hydrostatic pressure of not less than 150 psig, but not less than 50 psig permissible drop at end of four hours. Drainage Systems: Fill entire waste and vent system with water to level of highest vent stack. System shall hold water for two hours. Fuel Gas Systems: Test with air at a pressure of not less than 10 psig for a minimum of 15 minutes with no perceptible drop in pressure. For welded pipe or gas pressures greater than 14 inches water column, the test pressure shall not be less than 60 psig (or as approved by governing authority) and shall be continued for a minimum of 30 minutes. Rainwater Systems: Test in the same manner as described for the Drainage Systems above.
V. Disinfection of domestic water piping system. Verify system is complete, flushed and clean. Ensure Ph of water to be treated is between 7.4 and 7.6. Inject disinfectant, free chlorine in liquid, powder or gas form throughout system to obtain 50 to 80 mg/L residual. Bleed water from outlets to ensure distribution. Maintain disinfectant in system until residual is equal to incoming water of 1.0 mg/L. Analyze 24 hours after flushing in accordance with AWWA C651. Provide copies of Certificates of Performance.
W. Upon completion, secure all required pressure tests, inspections, and approvals of the completed system. Make all required adjustments and corrections at no added cost to the Owner.
X. Openings in the building envelope separating conditioned space from unconditioned space needed to accommodate piping and other necessary penetrations must be sealed in compliance with the California Energy Code. Exception: The annular spaces around pipes and other openings at exterior walls shall be protected against the passage of rodents by closing such openings with cement mortar, or concrete masonry.
Y. Wall hung fixtures shall be installed with carriers concealed in walls that are anchored to the floor in compliance with ASME A112.6.

3.4 PROTECTION FROM MARINE/COASTAL ENVIRONMENT
A. Contractor shall be responsible for protecting all plumbing systems from premature corrosion due to the coastal environment. This includes the use of non ferrous piping, supports, equipment and other materials and components. Epoxy paint, or wrap any exterior or exposed ferrous metallic plumbing systems. No sheet metal flashing is allowed. Contractor shall be responsible for any damage resulting from his failure to protect plumbing systems from premature corrosion.

3.5 REPAIR AND CLEANUP
A. After installation, inspect all work for improper installation or damage.
B. Operating fixtures must perform smoothly. Repair or replace any defective work. Repair work will be undetectable. Redo repairs if work is still defective, as directed by the Architect or governing safety regulatory agency.
C. Clean the work area and remove all scrap and excess materials from the site and dispose of in accordance with State and local requirements.
